

*The **GAP** Generator with no moving parts*

NEW-GAP HHO 2025-06-26 MIX

I have the lights, elements, and HHO at 1 inch level electrolyte above bottom of anode and cathode.

1 PS input
 $20 \times 15 = 300$ watts input

2 DC output at 5-48 min
 $20.10 \times 13.60 = 273.36$ DC watts output

3 AC output at 7-53 min
 $19.05 \times 9.72 = 185.17$ AC watts output
 $273.36 + 185.17 = 458.53$ Total watts output
 $458.53 - 300 = 158.53$ watts over unity
 $458.53 / 300 \times 100 = 152.84$ percent of unity.
